Grand Unified Search

Kimberly Jesse

Overview

- GUS Development
- What is GUS?
- Current GUS features

User Requests

- A stand alone way to search IADS
- More of a total package look and feel as opposed to several disconnected components
- Easier way to maneuver through IADS programs

User Requests

- Eliminate confusion about which search to perform

The Solution

One interface to provide one common access point for:

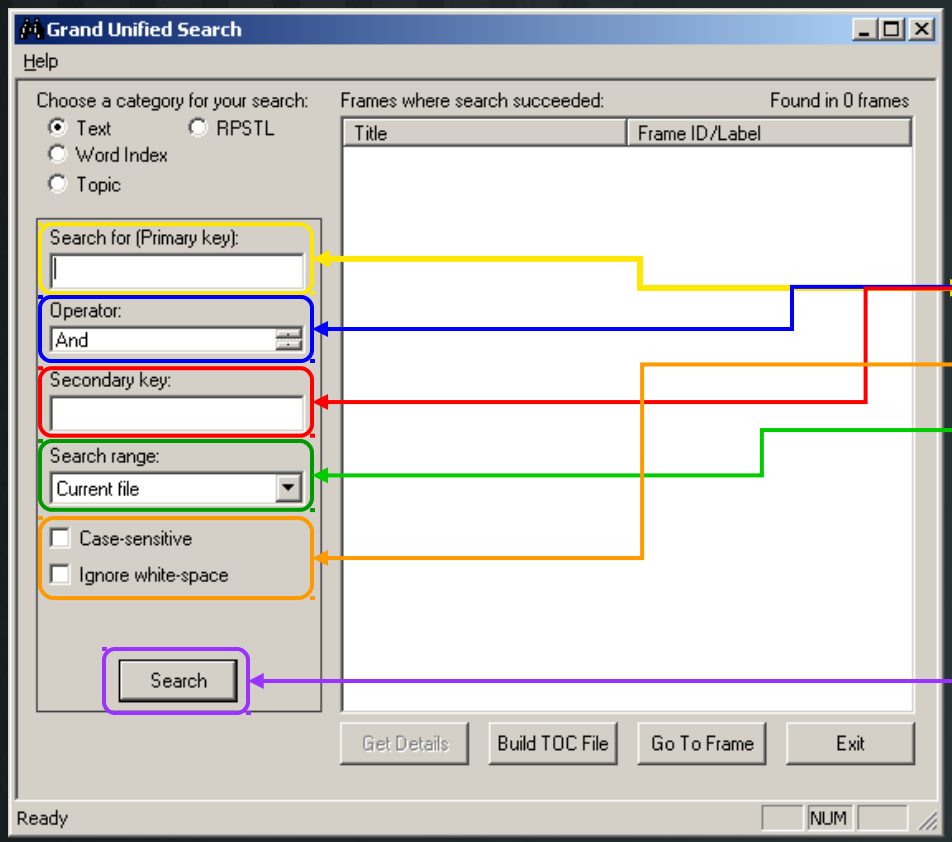
- IADS's text search
- RPSTL's parts information search
- IQuest Reader's associated topic search

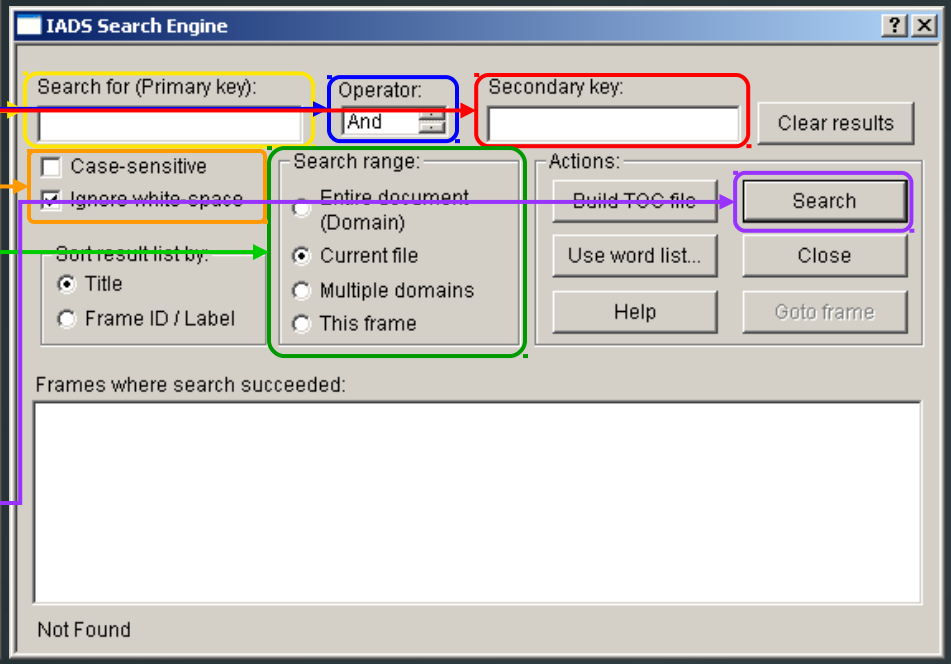
The Solution

One interface means:

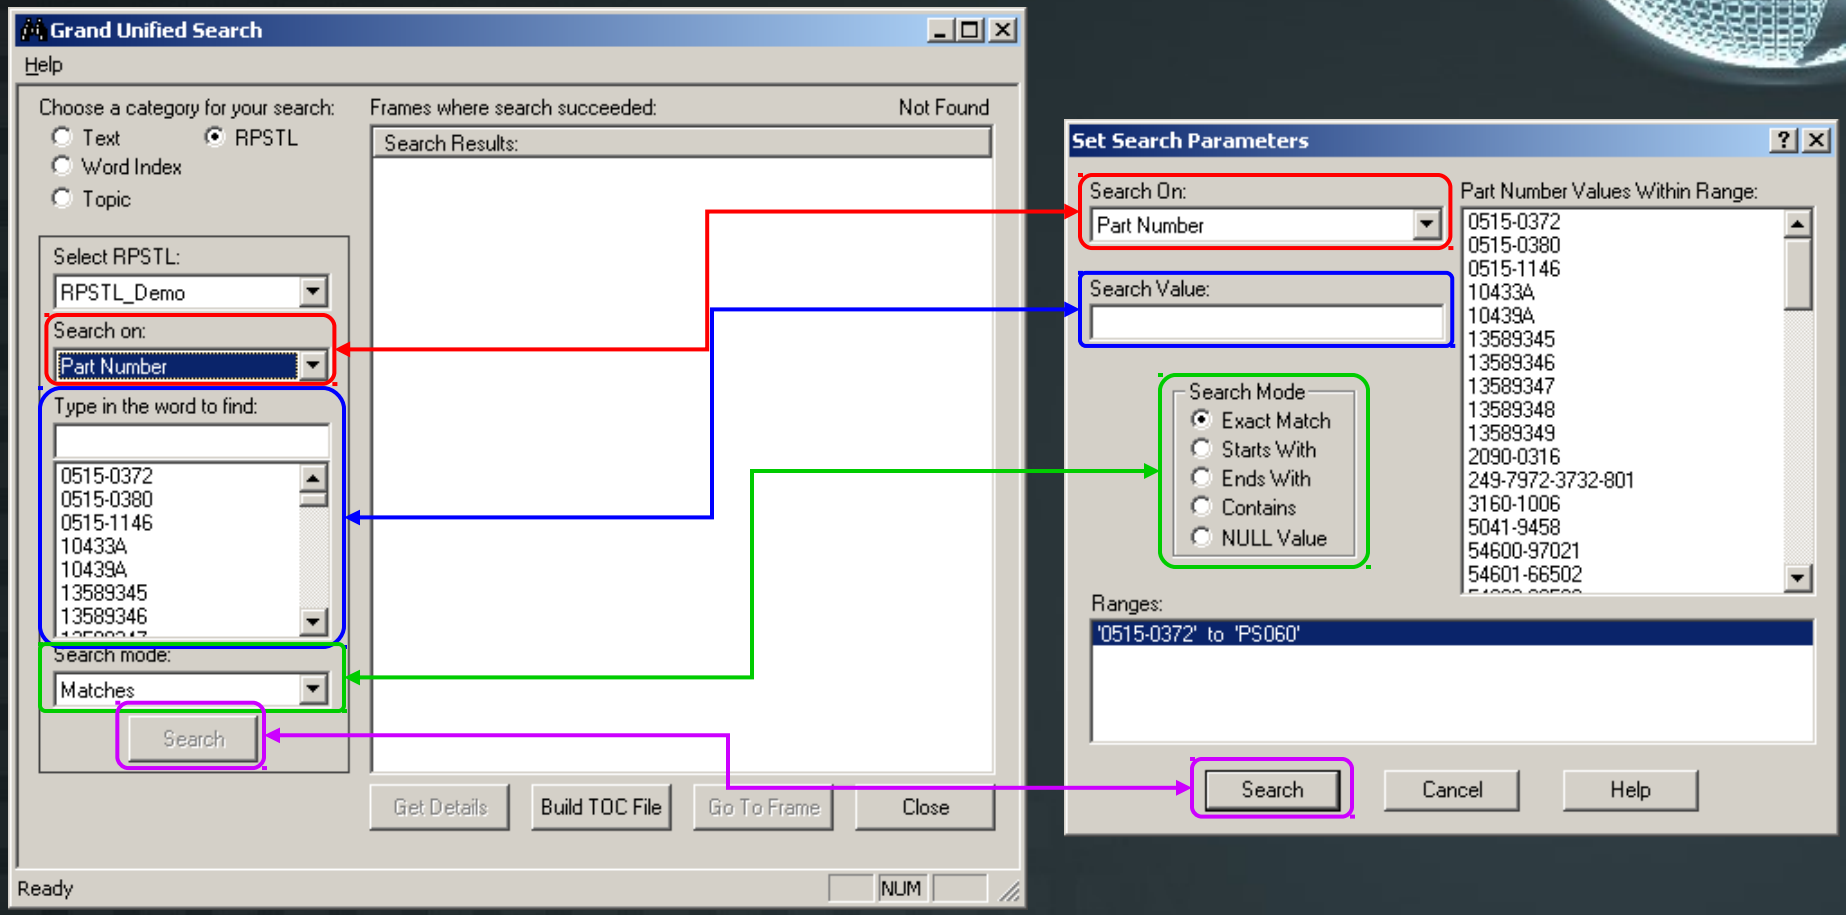
- Interface must behave the same throughout
- Novice IADS users master only one tool instead of three
- Only one interface for future changes

Text Search: New and Old

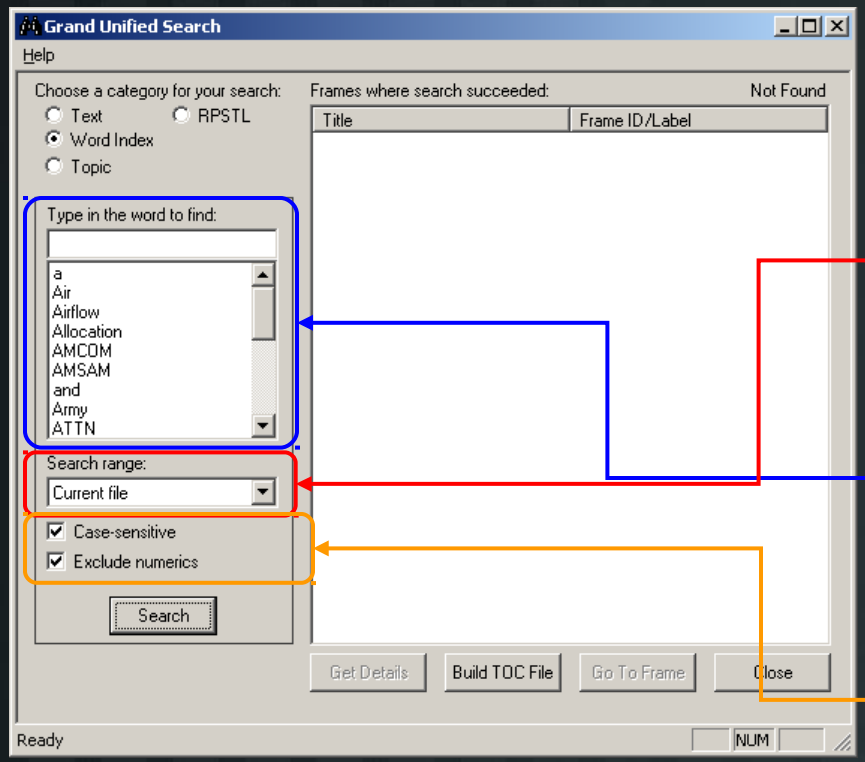


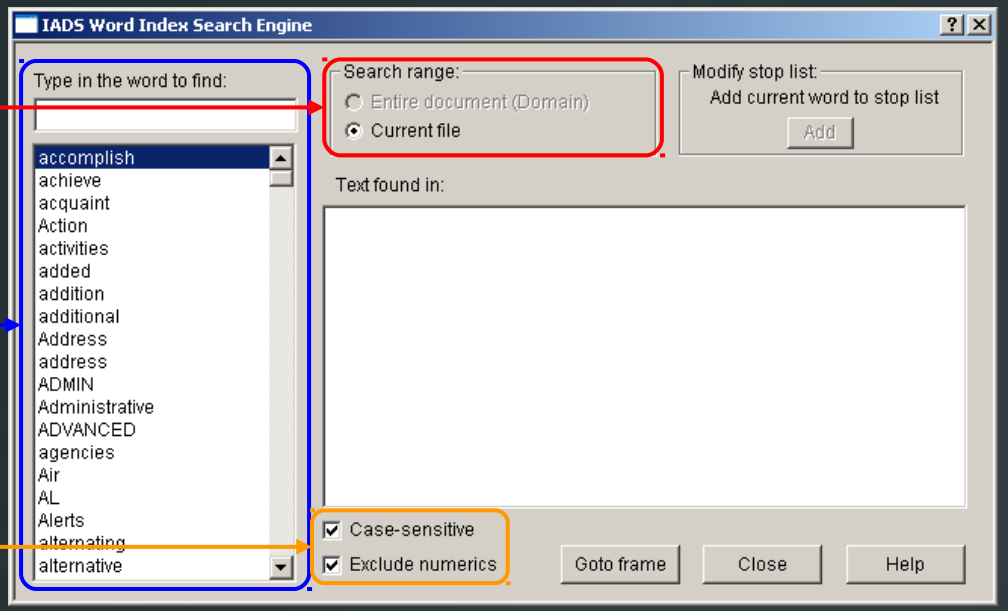


RPSTL Search: New and Old

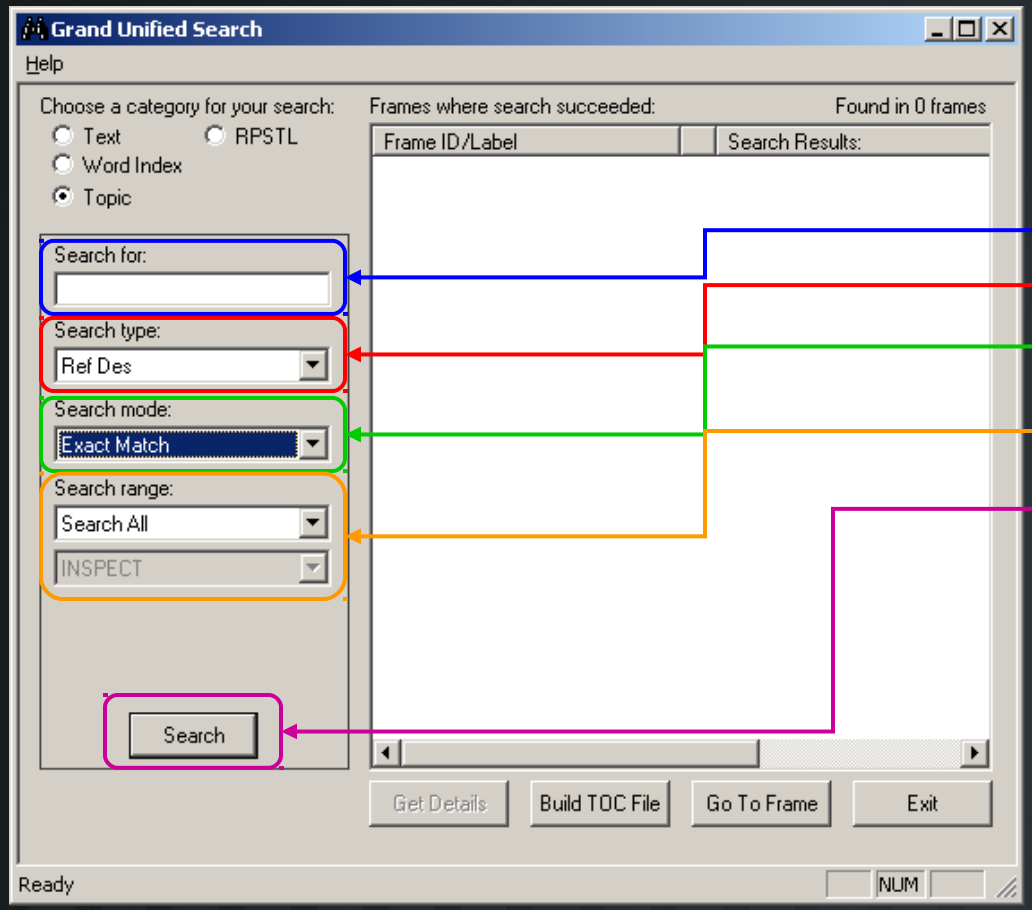


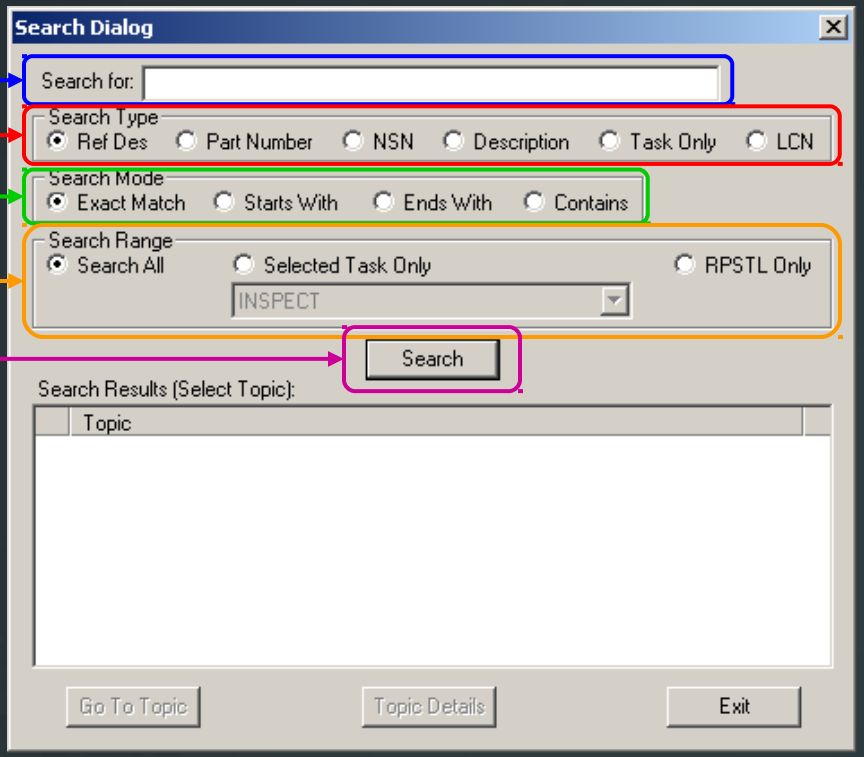
Word Index Search: New and Old





Topic Search: New and Old





Features

- A launching pad for opening up specific frames
- Records previous search settings and hits
- Auto scrolls to the value that closest matches typed in data

Features

- Resizable columns to display search results
- Ability to print search results

GUS Release 3.3 Demo

GUS Future Enhancements

- Ability to allow even further search flexibility by allowing user to search text, RPSTL information, and IQuest information at the same time

Conclusion

- Customer Driven Solutions to IETMs
